

## AviX® - Press Release, Paris - September 2008

---

### AviX® ERGO - Video Based Improvement of Ergonomics presented in the "Village de l'Ergonomie" on the Expo Protection 2008 in Paris-Nord Villepinte

From the 4<sup>th</sup> to the 7<sup>th</sup> of November 2008 in Paris-Nord Villepinte, Hall 5, Solme AB from Göteborg, Sweden will present for the first time its innovative suite of video based AviX® applications on the Expo Protection in Paris, France. By using the AviX® software, companies increase their productivity, ergonomics, quality and collaboration.

Exclusivity: the visitors of the "Village de l'Ergonomie" will be the first to see AviX® ERGO Base, the new release of the proven ergonomics tool. The software analyzes a video taken from a production process. It directly calculates stress and strain on the employee, evaluates the risk for repetitive muscle strains often leading to Musculoskeletal Disorders, and offers possibilities to improve the layout and organization of the workplace.

AviX® ERGO Base forms an important part of AviX® - The Industrial Office, in addition to the other applications in the AviX® family:

- AviX® Method allows our customers to increase the operating productivity by using an innovative approach to Method- and Time-studies, again, based on a video taken from a production process which is directly evaluated on the computer.
- AviX® Balance helps balancing an entire production line by moving the previously evaluated work contents to the best position on the line - as simple as drag & drop.
- AviX® FMEA increases the quality by looking at the same video with the tools of the proven FMEA methodology.

- Finally, AviX® DFX drives the element of prevention further up the value chain by visually supporting the engineers to include aspects of manufacturability into their designs.

The AviX® suite of applications has been developed in close cooperation with leading Swedish industrial companies over the past decade. Today Solme AB's customer list is a who-is-who of the Swedish industry, including companies like ABB, Alfa Laval, Ericsson, IKEA, Scania and Volvo, who incorporate the AviX® products as a core part of their global production system.
